# A New Era of Water Management

Cutting Edge Technology Designed for Savvy Building Managers & Asset Owners

- ✓ Improve Forecasting & Visibility
- ✓ Improve Workplace Health & Safety
- ✓ Improve Customer Satisfaction & Retention
- ✓ Improve Asset Life & ROI
- ✓ Improve Profits & Lower Insurance Premiums
- ✓ Improve Maintenance Costs & Utility Charges
- ✓ Improve Amenity & Room Availability

WIND™ Technology   Water Intelligent Network Detection

Each building type has its own unique features, challenges and opportunities. Without a good understanding of the various assets within a building and the relationships between them, it is impossible to maintain efficient operations or identify areas to reduce cost, improve performance.

Early Warning

Slash costly maintenance and ensure precise action from anywhere with our exclusive remote monitoring system.

Performance Analysis

New technologies and programming advancements minimise water and energy usage as well as reducing operating costs.

Vulnerability Prevention

Remote monitoring means your clients don't have to wait for a technician to come out and diagnose an issue, minimising disruption to their day.

From your computer, you can see if a tap has been left running at any site or if there's a potential blockage occurring.

Graphical User Interface Live Monitor Multiple Sites

Water Use Analysis

See all programs and validate everything. The UI provides a series of graphs showing all of the controls. This is great for troubleshooting because you can see issues with particular fixtures and make adjustments.

Amenity Security Solutions

Essentially, the system communicates with the controls in your network, which in turn communicates with the sensors and the software collects data to create reports on how well your amenities are working.

Get Started

We partner with you to enhance your property by introducing state of the art technology, product sustainability and, professionalism with a personal touch. Through regular monitoring and auditing of entire plumbing systems, bathroom areas and building functions, like drainage and flood control systems, our team organises and drives the up-keep of your property. New technologies and programming advancements minimise water and energy usage as well as reducing operating costs.
